

Your Task:

1. Use the internet to research other possible ways that the Tree-Hugger family could save energy. This could include other purchases, renovations, repairs, and suggestions (tips) for members of the family to reduce their energy use. You must have a minimum of 10 suggestions.
2. From your researched list, recommend the three top suggestions that you believe will have the most impact. Justify your decision.
3. Explain other possible side benefits to the homeowner, neighbours, and society in general. (i.e. How do these modifications impact the environment?)
4. Put together this “energy saving” information in the form of a PowerPoint presentation to present to the family. Include visuals and text information. Begin with a main slide explaining what the presentation is about. Each additional slide must have a title.

Possible Sources of Information for your PowerPoint presentation: (feel free to research more on the internet ☺)
